

Goal/Problem Statement: Assess water accessibility and queue times to identify communities experiencing inadequate or unreliable access to water.

Assessment: Queue times vary significantly by province and day, with **Saturday** recording the highest average waiting time, while Kilimani has the highest total queue time.

Assessment: The hourly trends indicate periods of increased demand, suggesting that available water points may not adequately meet community needs.

Recommendation: Increase water supply capacity and establish additional water points in high-demand provinces and during peak periods to reduce waiting times.

Recommendation: Prioritize underserved communities and monitor queue patterns to improve equitable and reliable access to clean water.

& CRIME RATE

Goal: Assess the relationship between passenger class, age, and Titanic survival outcomes, with emphasis on vulnerable age groups.

- **Assessment:** Survival rates differed significantly by passenger class, with First Class at 63%, Second Class at 47%, and Third Class at only 24%.
- **Assessment:** Children generally had higher survival rates, while seniors recorded the lowest outcomes, particularly in Second and Third Class.
- **Assessment:** The findings indicate a substantial disparity in survival outcomes across both passenger class and age groups.

- **Recommendation:** Ensure **equal access to emergency facilities, evacuation routes, and safety resources** for all passengers, regardless of class or age.
- **Recommendation:** Conduct further statistical analysis to validate the findings and strengthen **equitable safety and emergency-planning measures**.

TABLEAU DASHBOARD-Revenue and Sales Analysis

Key Insights

- **Clothing** stands out as the dominant revenue and sales volume driver for the business, while **Outerwear** and **Footwear** lag severely behind.
- A massive **73% of the customer base (2.85K customers)** are currently non-subscribers, representing a major untapped retention opportunity.
- Revenue is evenly split across all age brackets, but **Young Adults** and **Middle-aged** demographics buy at the highest frequency.

Recommendations to Management

- **Launch a subscriber conversion campaign** offering a one-time discount to transition the 2.85K non-subscribers into regular members.
- **Create cross-category bundles** pairing low-performing **Outerwear** and **Footwear** with high-demand **Clothing** items to move stagnant inventory.
- **Deploy targeted retention ads** specifically to **Young Adult** and **Middle-aged segments** to maximize their high purchase frequency and boost the current \$59.76 average spend.
